

Small tutorial on how to configure your network WIFI with your Enigma2 equipment.

1 Devemos to know who has our USB WIFI chipset that will connect.

If you know these data can find out from a PC, Device Manager, Network Adapters, Details, property, select Id. Hardware

It appears to us something like (PCI \ VEN_10EC & DEV_8168 & CC_0200) chipset model 8168 Esat serious card.

2 In our receiver have to go to Menu, Plugins, Download plugins in the drivers section, we look for our WIFI chipset with the model we have and downloaded this plugins,

after unloading must restart the receiver.

3rd now let's Menu, System, Network, configure network, is where we set our access WIFI adapter if the driver and the USB WIFI are well configured see

2 options to configure the network cable and wireless. Wlan is to configure wu WIFI, introduciendo its SSID as well as the key you have your Wireless Network.
